

Zach Perry

Senior Software Engineer · Program & Launch Leadership

Marietta, GA · zachrperry@outlook.com · linkedin.com/in/zachrperry · github.com/ZachRPerry

Summary

13+ years shipping web platforms, most of it as the person accountable for the launch — scoping the MVP against what the business actually needs, sequencing dependencies across product, QA, and operations, and owning delivery through production stabilization. Deep enough technically to be useful in the architecture conversation, and comfortable translating between engineering and the stakeholders who own the process being changed. Currently building 0→1 AI products, where launch readiness has to be a measured gate rather than a judgment call. Product School certified.

Selected launches & programs

- **500+ stores in 3 weeks** — COVID contactless-ordering launch, ~25% under budget (*RaceTrac*)
- **Kentico 12 → 13 migration** — two business-critical sites across product, QA, and ops (*Patterson*)
- **Onboarding: ~30 days → under 10 minutes** — cross-functional process redesign (*Patterson*)
- **Freeish, live on the App Store** — 0→1 launch, plus a platform migration under a shipped build (*independent*)

Experience

Senior Software Engineer — TEKsystems (Contract, at Patterson Companies)

Atlanta, GA · Nov 2021 – Present

Dental and vet e-commerce platforms: Kentico CMS on the marketing side, a custom C# / SQL application for catalog, cart, checkout, and order management.

- **Led the Kentico 12 → 13 upgrade** for both brand sites — planning, technical design, dependency management, rollout sequencing, and production stabilization, coordinated across product, QA, and ops to de-risk a multi-year migration.
- **Cut customer onboarding from ~30 days to under 10 minutes** by taking manual account provisioning off the critical path — customers get a restricted account immediately and can order while back-office review completes asynchronously. The work was redesigning the workflow with the business teams who owned the manual steps and getting agreement on what "restricted" meant.
- **Migrated a 60K+ email/week marketing platform** off vendor-managed infrastructure into in-house ownership — vendor exit, capability parity, handover.
- Own the CMS-to-commerce integration boundary — two systems, different release cadences, different owners. Architecture and code review, contractor onboarding, documentation, production incident response.

Senior Developer & Team Lead — RaceTrac

Atlanta, GA · Sep 2015 – Nov 2021 · Promoted 2019

- **Launched contactless ordering to 500+ stores in 3 weeks** during COVID, ~25% under budgeted time — scoped the MVP against business requirements, sequenced store-level product, pricing, and tax-rate

variation, and integrated Payeezy + ServiceNow under the same clock.

- **Ran the RaceTrac.com rebuild end to end** — pitched it to leadership, architected it, managed an external design agency through delivery; monthly traffic **90K → 200K** (+120%). Load-tested to 30K concurrent on Azure.
- **Rewards VIP (1M+ users)** — stood up a separate loyalty site to validate a paid fuel-discount program *before* committing it to the main platform, then merged it once the bet paid off.
- **SSC Portal** (1,000+ employees) — intranet with OnBase, HR, and AD integration; custom SignalR chat. **Won Kentico Site of the Year for Intranet (2016)**.
- Ran daily Scrum and sprint planning with dev, QA, and product owners; mentored two developers; pitched enhancements to project managers and leadership.

Independent — Remidy Labs

2026 – Present · remidylabs.com

Building consumer apps solo — product, engineering, release, and the decision record.

- **Evals as the go/no-go gate** — a 63-check harness over labeled documents decides which model ships on which task, with a written accuracy/cost/latency comparison and a standing rule that nothing down-tiers without that task's eval green.
- **Decision registers and ADRs** — what was decided, what's deliberately unproven, what got cut, including a documented descope where the justification "did not survive contact."
- **Phased delivery** — every phase is one deploy leaving the app working; a live platform migration runs underneath a shipped App Store build.
- **Remidy Control** — dependency graph with derived readiness and critical path, structured gates for blocking human work, and completion that requires evidence rather than assertion. Program management, encoded.

Kentico Developer — Codesummit, LLC

Aurora, OH · May 2013 – Sep 2015 — client-services delivery against external client commitments; localization for Spanish-speaking users; SQL-view-backed features migrated to event-driven flows with caching.

Tech

Program: Agile/Scrum · Program planning · Dependency & risk management · Stakeholder management · Requirements & user stories · Launch readiness · Incident response

Engineering: C# · ASP.NET MVC · ASP.NET Web API · SignalR · TypeScript · React · Next.js · Swift/SwiftUI · Kotlin/Compose · SQL · Postgres

AI: Claude API (vision + structured extraction) · MCP servers · eval harnesses & model comparison · confidence-gated human review

Cloud & CMS: Azure (Web Apps, SQL, Blob, Redis) · Kubernetes · Azure DevOps · Vercel · Supabase · Kentico (12 yrs, Certified Developer) · Kentico EMS/Xperience

Certifications & Education

Product Manager Certificate — Product School (2022) · **Kentico Certified Developer** · **OnBase Certified System Administrator (OCSA)**, Workflow Administrator (OCWA), ABI Developer

Associate of Applied Business — Marion Technical College (2013)
