

Zach Perry

Senior Software Engineer

Marietta, GA · zachrperry@outlook.com · linkedin.com/in/zachrperry · github.com/ZachRPerry

Summary

13+ years building and shipping web products — writing the requirements, building the features, and staying accountable through production. Deep .NET and Kentico background with a modern TypeScript/React and native mobile practice, and current hands-on work shipping consumer AI products where launch readiness is a measured gate rather than a judgment call. Product School certified.

Selected launches

- **Contactless ordering, 500+ stores, 3 weeks** — two-person team; estimated four, given three, delivered (*RaceTrac*)
- **RaceTrac.com consolidation** — brought the site in-house, pitched the rebuild with data; traffic 90K → 200K (*RaceTrac*)
- **Kentico 12 → 13 upgrade** — both brand sites, including migrating auth to Microsoft Entra ID (*Patterson*)
- **Freeish, live on the App Store** — 0 → 1 launch, plus a platform migration under a shipped build (*independent*)

Experience

Senior Software Engineer — TEKsystems (Contract, at Patterson Companies)

Remote · Nov 2021 – Present

Dental and vet e-commerce platforms: Kentico CMS on the marketing side, a custom C# / SQL application for catalog, cart, checkout, and order management.

- **The internal Kentico developer for both brand sites** — user stories, development, QA coordination, and production content support for marketing, end to end; also develop the content microservice the e-commerce apps use to pull CMS content.
- **Executed the Kentico 12 → 13 upgrade** across both sites, including migrating authentication from forms auth to Microsoft Entra ID; coordinate with the third-party vendor managing Patterson's other Kentico properties, developing on them when needed.
- Did most of the Kentico work **migrating a 60K+ email/week marketing platform in-house**, and was one of several engineers on the onboarding redesign that cut new-customer setup from ~28 days to ~15 minutes.
- **Onboarded three developers**; member of the code-reviewers group; first responder for Kentico production issues; early go-to for the team's internal developer platform (custom Kubernetes tooling).

Senior Developer & Team Lead — RaceTrac

Atlanta, GA · Sep 2015 – Nov 2021 · Promoted 2019

- **Built contactless ordering for 500+ stores in 3 weeks** during COVID on a two-person team — estimated four weeks for the MVP, was given three, delivered. Customized Kentico e-commerce for per-store product availability (content-editor CSV uploads); second release routed orders to store iPads via ServiceNow.
- **Brought RaceTrac.com in-house and pitched the rebuild** — joined marketing's agency calls, diagnosed why small changes took weeks (an agency that couldn't manage .NET), and used analytics — 90% of visitors never

left the landing page — to sell consolidating the site and its microsites into one marketing-manageable platform. Built by the same two-person team; load-tested to 30K concurrent users on one Azure Web App; monthly traffic **90K** → **200K** after bringing loyalty to web.

- **Built the Rewards VIP pilot** — a standalone signup site with Payeezy subscription billing that validated a paid fuel-discount program before RaceTrac rolled it into the main loyalty platform and app.
- **SSC Portal** (1,000+ employees) — intranet with OnBase, HR, and AD integration; custom SignalR chat. **Won Kentico Site of the Year for Intranet (2016)**.
- Ran daily Scrum and sprint planning with dev, QA, and product owners; mentored two developers; pitched enhancements to project managers and leadership.

Independent — Remidy Labs

2026 – Present · remidylabs.com

Building consumer apps solo — product, engineering, release, and the decision record.

- **Evals as the go/no-go gate** — a 63-check harness over labeled documents decides which model ships on which task, with a written accuracy/cost/latency comparison and a standing rule that nothing down-tiers without that task's eval green.
- **Safety prohibitions as release gates** — a written AI safety spec where every prohibition is a deterministic check; one confirmed violation blocks the prompt revision from shipping.
- **Phased delivery** — every phase is one deploy leaving the app working; a live platform migration runs underneath a shipped App Store build.

Kentico Developer — Codesummit, LLC

Aurora, OH · May 2013 – Sep 2015 — client-services delivery against external client commitments; localization for Spanish-speaking users; SQL-view-backed features migrated to event-driven flows with caching.

Tech

Engineering: C# · ASP.NET MVC · ASP.NET Web API · SignalR · TypeScript · React · Next.js · Swift/SwiftUI · Kotlin/Compose · SQL · Postgres

AI: Claude API (vision + structured extraction) · eval harnesses & model comparison · confidence-gated human review

Cloud & CMS: Azure (Web Apps, SQL, Blob, Redis) · Kubernetes · Azure DevOps · Vercel · Supabase · Kentico (12 yrs, Certified Developer) · Kentico EMS/Xperience

Practices: Agile/Scrum · User stories & requirements · Code review · Mentoring · Incident response · Dependency & risk management

Certifications & Education

Product Manager Certificate — Product School (2022) · **Kentico Certified Developer** · **OnBase Certified System Administrator (OCSA)**, **Workflow Administrator (OCWA)**, **ABI Developer**

Associate of Applied Business — Marion Technical College (2013)
